

Guelph Forklift Training Classes

Guelph Forklift Training Classes - Lift trucks are a type of heavy lifting machine utilized in order to move and handle material efficiently and safely. Sometimes referred to as Lift Trucks, they are used in a variety of industries. Workers working with and around lift trucks should be trained to recognize dangers associated with the operation of forklifts.

We provide forklift training classes in order to teach our trainees how to safely make use of a lift truck. The theory part of the course will include classes and instruction on becoming a lift truck operator. Individual training will learn their legal responsibilities as forklift operators. Upon completion of the classes, a printed certificate will be given. The certificate must be signed by someone qualified to verify that a hands-on evaluation has been done in the trainee's workplace.

Forklift Safety

Forklift trucks are vital in industrial workplaces for their ability to lift and transport heavy loads. Forklifts are indispensable to many industrial worksites, but forklifts could be dangerous without correctly training workers. Forklift injuries, when they occur, tend to be serious because of the power of these heavy machines. Staff who work regularly around forklifts could become complacent and forget the dangers. Vital maintenance and operating procedures might be ignored.

Forklift training is needed for new workers, but all operators must undergo periodic re-training. First aid training is vital also.

The daily check is critically important in the everyday operations and maintenance of a forklift. The lift truck may become damaged if not correctly maintained. Prior to being used, lift trucks should be visually checked as to their general condition. An operational inspection must be done in order to determine the machine is working correctly. The supervisor should be alerted if anything is noted which could impact the safe utilization of the lift truck.

Inspections should include checking the work area to make certain it is clear of objects that can be a problem. Overhead objects and obstructions should be inspected also. It is vital to have a working fire extinguisher available and accessible. Various levels must be checked, like fuel, radiator water, engine oil, and electrolyte levels in cells. Cables, plugs and batteries should be checked. Unclog vent caps and make certain that nuts, bolts, chains, guards, and hydraulic hose reels are not missing, loose or damaged. A tire check will ensure that wheels are not worn or damaged. Pneumatic tires will require a pressure inspection.
