

## Guelph Scissor Lift Operator Certification

Guelph Scissor Lift Operator Certification - Regulations in North America typically recommend that operators of booms, scissor lifts or aerial work platforms all obtain operator certification. Scissor lift operator certification is not mandatory, but there are advantages to making certain that this particular training is offered to all operators.

Scissor lift is a platform that vertically moves to be able to enable staff to have access to high levels. Scissor lifts are made together with a pantograph - connected, folding supports in an 'X' pattern. Upward movement happens when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by elongating the 'X' pattern. A bridge extends from particular platforms to allow convenient access to the work area.

The platform returns to the ground by release of a manual valve. The platform returns through simple release of hydraulic or pneumatic pressure. This is the main reason that scissor lifts are the machine of choice at worksites.

Operators which are both inexperienced or experienced will be able to get some benefit from correct scissor lift training. A scissor lift operator certification course could be specifically designed to accommodate for those lifts used at your workplace. The trainees' certificate of training will list the models on which they trained.

Included in the classroom instruction are the following topics: attitude rules and guidelines and authorization; introduction to scissor lift training; safety regulations and common hazards; Occupational Health and Safety; workbook and record of training (ROT)

The in-class session will end with a written test.

Practical hands-on training includes instruction about the following: safety equipment; pre-operational inspection; regular maintenance; function checklist; operator's manual and the practical session would conclude with a demonstration of proficiency.
