

Guelph Aerial Lift Train the Trainer

Guelph Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to effectively train operators in safe industrial mobile machinery operation. Trainers are provided with in-depth instruction on aerial lift machine. The program is provided on an open enrollment basis and delivered at select training sites. Before the certification, trainers are evaluated and scored based on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the best training provider within the industry, we offer top notch hands-on training. We give lots of opportunities to practice the concepts and techniques that are taught within the classroom. Together with hands-on experience, trainers develop general understanding of machinery theory and instructional techniques, field and classroom communication skills, and ability to successfully train and assess operators. Trainers will gain knowledge of what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts inside a classroom and/or field situation. Knowledge needs a training component to be efficient in workplace conditions. There are three factors of machine operation that the trainer must learn how to convey to operators: what to perform; how to do it; and the reason why it should be done.

In the program, trainers will be provided with the detailed, latest reference material to better help them convey the information to equipment operators. The instruction manuals used, include detailed information about all aspects of industrial mobile equipment operator training. Included within the package are training aids which provide a visual reference to enhance the learning experience. The equipment-specific training products contain important materials meant for both the operator and the trainer: videos/DVD's, overhead transparencies, equipment models, safety message posters; stability pyramids and digital training aids.
