Guelph Crane Safety Training

Guelph Crane Safety Training - Both crane driver as well as their employers need to know all the possible issues related to the operation of an overhead crane. All over North America, there is legislation which provides regulation for the safe maintenance, operation and inspection of lifting machines. Crane Safety courses really help crane owners and managers accredit their drivers in accordance with provincial legislation.

We have designed numerous training courses to equip drivers with all the knowledge and skills needed to make crane lifting easier and safer. Operator training really helps to extend the crane's life span by ensuring crane's high performance and safe operation.

Articulated cranes under 16,000 lbs. capacity can just be operated by accredited operators. Operators have to know concerning the operational characteristics and features of the machine. Prior to use, a pre-operational equipment check has to be performed. There is a legal requirement to perform a pre-operational check as well as a check of the overhead conditions and work-site ground.

The manufacturer's directions provide information regarding maintenance and inspection, unloading and loading of the crane. The law requires annual and daily checks. Drivers should maintain an up-to-date logbook in most places. They may be required to certify equipment warranties.

It is suggested that companies add remote control devices to their cranes. Remote control enhances safety by enabling the operator an easier option for handling the crane.

Prioritizing crane safety helps a company's bottom line. Companies which follow safe equipment practices generally enjoy greater cost savings than those which don't. The chance of personal injury and equipment damage is really reduced when a well trained driver is handling the crane. Safety conscious drivers are more productive leading to reduced times required for loading and unloading.
